New Challenges require innovative Solutions

Arm your organisation for future processes. Whether in the field of [Industrie 4.0](#), [Internet / Intranet](#), Internet of Things or Finance authentication and transactions are the foundation of modern business:

- every field of IT needs [secure and verifiable communication](#)
- today's [password-](#) and [TAN-based](#) methods provide [insufficient security](#)
- latest Multifactor Authentication solutions are [neither flexible nor useable](#) enough
- [broad user acceptance](#) for token-based solutions does not exist
- the [challenges are continuously rising](#) through advance of worldwide networking

XignQR provides modern QR Code based [Multifactor Authentication](#) via [mobile devices](#), suitable for daily use. Through the combination of a QR Code and the Smartphone App, XignQR deals with [countless use cases](#) in the digital and real world. Use XignQR directly out of the [Public or Managed Cloud](#) or install XignQR in your own environment.

XignQR

XignQR helps to reduce costs and to optimize processes.

XignQR brings:

- fast & useable [Multifactor Authentication](#)
- enhance security through [waiver of passwords](#)
- [Simplifies riskmanagement](#)
- [Protection](#) of sensitive userdata and [outsourcing](#) of required Know-How
- optional [use across different organisations](#)
- [Cost reduction](#) through minimized integration and maintaining expenses
- [Platform independent](#)
- [User acceptance](#) through familiar procedures and their own device
